

QA Project: TaskTracker

1. Project Description

TaskTracker is a web-based task management application. It allows users to register, log in, and manage tasks. Each task has a title, description, and status.

2. Requirements

- User can register using email and password.
- User can log in.
- User can create, edit, and delete tasks.
- Task statuses: To Do, In Progress, Done.
- Search functionality for tasks by title.

3. Test Cases

ID	Test Name	Steps	Expected Result
TC01	Successful Registration	1. Open registration form 2. Enter email and password 3. Click Register	User is logged in and redirected to dashboard
TC02	Task Creation	1. Log in 2. Click "Create Task" 3. Fill in data 4. Save	Task appears in the list
TC03	Search Task	1. Enter task name in search 2. Press enter	Matching tasks are shown
TC04	Email Validation	1. Enter invalid email 2. Click Register	Error message is displayed

4. Bug Report

ID: BUG-001

Title: Task saved without title

****Steps to Reproduce:****

1. Log in
2. Click 'Create Task'
3. Leave title blank
4. Click Save

****Expected Result:**** Error message 'Title is required'

****Actual Result:**** Task is saved with empty title

****Severity:**** High

****Priority:**** Medium

5. Checklist

ID	Check	Status
CH01	Email validation on registration	Passed
CH02	Title length limit	Passed
CH03	Task deletion	Passed
CH04	Search by partial title	Failed

6. API Testing Example (Postman)

****Endpoint:**** POST /api/login

****Request Body:**** { "email": "test@test.com", "password": "123456" }

****Expected Response:****

- Status: 200 OK

- Body: { "token": "abc123" }

****Checks:****

- Status code

- Response time

- Error messages for wrong credentials

7. Automation Ideas

- Login tests (valid and invalid credentials)
- CRUD operations for tasks
- Smoke tests after deployments
